1. Exercise

a. A process in Tinkercad where we can develop electronic circuits that can be quickly updated, modified, and tested is called **simulation**.

b. In Tinkercad, **simulation** tests the working of the circuits and the components.

c. The device used to assemble and connect the various components is known as **breadboard**.

d. In an electronic circuit with LED, the positive end of the circuit should be connected to **anode** and negative end should be connected to **cathode** of the LED.

e. A **resistor** is used to restrict the flow of current to electrical components
